SUMMARY

Software Developer with 1.5+ years of experience architecting and independently deploying production backend systems using Node.js, Express.js, PostgreSQL, and Prisma ORM. Owns the full development lifecycle — database design, API architecture, containerized deployment, and production support — across fintech-compliance and EdTech SaaS platforms currently serving live users. Strong focus on RESTful API design, authentication systems, and scalable backend architecture.

KEY ACHIEVEMENTS

- Independently deployed and maintain 2 production SaaS platforms actively used by real students, administrators, and enterprise clients.
- Designed a 9-role, multi-tenant RBAC architecture enforcing strict data isolation across multiple organizations on a single platform.
- Own backend systems end-to-end: schema design, API development, Docker/Nginx configuration, CI/CD pipelines, and production monitoring.

TECHNICAL SKILLS

Backend Technologies: Node.js, Express.js, RESTful APIs, Socket.IO, System Design, Microservices

Databases: PostgreSQL, MySQL, SQL Server, MongoDB, Redis, Prisma ORM, Schema Design, Indexing, Query Optimization

Cloud & DevOps: Docker, Nginx, GitHub Actions (CI/CD), VPS Deployment, Render, Vercel, Git

Authentication & Security: JWT, OTP Auth, Keycloak, RBAC, AES-256 Encryption, Rate Limiting

Frontend: React.js, TypeScript, JavaScript (ES6+), Tailwind CSS, Zustand, React Query

Compliance & Practices: GDPR, DPDPA, ISO 27701, Agile/Scrum, npm Package Publishing, Postman

PROFESSIONAL EXPERIENCE

Software Developer — GoTrust, Noida, Uttar Pradesh | Mar 2026 – Present

- Own end-to-end backend development for GoTrust's privacy-compliance modules (Data Mapping, DSR Response), architecting RESTful APIs in Node.js/Express.js that cut average response time by ~30% under concurrent enterprise workloads.
- Designed PostgreSQL schemas and composite-index strategies for PII classification across 1M+ record datasets, and built Keycloak-integrated RBAC/JWT authentication securing 10,000+ user records aligned with DPDPA, GDPR, and ISO 27701.

Junior Software Developer — AppVin Technologies, Noida, Uttar Pradesh | Aug 2025 – Feb 2026

- Owned RESTful API development for enterprise ERP, logistics, and healthcare applications in Node.js/Express.js, architecting multi-region deployment support and reducing average response time by ~30%.
- Designed PostgreSQL/SQL schemas with indexing strategies for high-frequency ERP reporting, implemented JWT-based multi-role RBAC securing 5,000+ users, and debugged production incidents through root-cause analysis.

Full Stack Web Developer — Pragyan Solutions LLP, Lucknow, Uttar Pradesh | Jan 2025 – Jul 2025

- Built and deployed full-stack SaaS applications (CRM, School Management System) in React.js, Node.js, Express.js, and SQL Server, owning JWT authentication and RBAC end-to-end; shipped production releases on IIS, Vercel, and Render.

PROJECTS

Tinkergyan — Multi-Tenant Embedded Systems Learning Platform | Production - Live Users

Live: code.stemmantra.com | GitHub: github.com/Arya4546/tinkergyan

- Architected a three-tier compilation engine (remote GCC via Wandbox, local Arduino CLI, sandboxed fallback) with semaphore-based concurrency control and network-isolated Docker sandboxes for safe real-time C++ compilation for learners aged 8-14.
- Designed a hybrid JWT + Redis authentication layer with refresh-token rotation and automatic breach detection; owned production deployment end-to-end on a self-hosted VPS with zero-downtime CI/CD via GitHub Actions.

CodeSense AI — AI-Powered Developer Tooling Platform | Personal Project

GitHub: github.com/Arya4546/codesense-ai

- Architected a multi-surface AI code-analysis platform (React web app, VS Code extension, CLI npm package) with a Dockerized Node.js/Express backend and GitHub Actions webhook integration; published codesense-ai to npm with a pipe-based CLI for CI/CD embedding.

STEMmantra — Multi-Tenant Learning Management System | Production - Live Users

Live: lms.tinkergyan.in

- Architected a 9-role, multi-tenant RBAC system with strict tenant-level data isolation and a DRM-style content protection layer (single-use access tokens, Referer validation, HTTP 206 range-request streaming).
- Migrated the production database to self-hosted PostgreSQL on a VPS, configuring Nginx, SSL, and Backblaze B2 object storage with a transactional file-then-DB upload pattern.

Real Media (Beautiful Encer) — Influencer Marketing SaaS | Contract - Japan Client

Live: beautiful-encer.vercel.app | GitHub: github.com/Arya4546/Beautiful_Encer

- Architected a decoupled monorepo SaaS (Express/PostgreSQL/Prisma API + React/Vite frontend) connecting influencers and salons, with dual-role JWT/OTP authentication, AES-256-GCM encrypted OAuth tokens, and a Socket.IO real-time chat layer.
- Integrated Instagram, TikTok, and YouTube data via Apify scraping with 7-day caching and node-cron sync jobs; engineered Stripe subscription billing and an admin dashboard for user and connection moderation.

EDUCATION

B.Tech, Computer Science & Engineering | School of Management Sciences, Lucknow | 2021 – 2025

Capstone: Hospital Management System — full-stack app with role-based access control.
